

Pwn Cloud

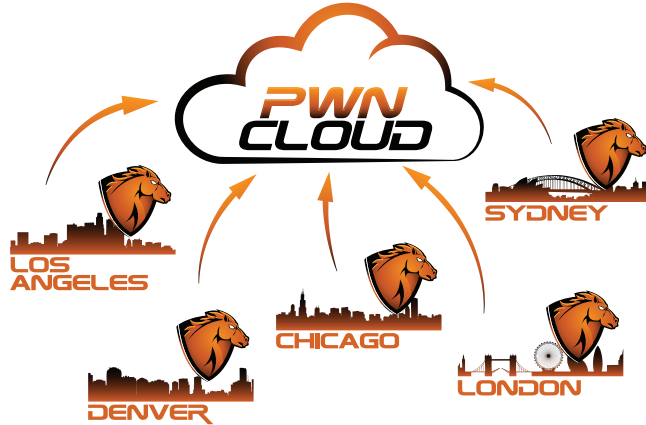

Moving on the challenge of scalable remote testing

66% of breaches go undetected for months, according to the Verizon 2013 Data Breach Investigations Report, increasing the potential damage. Most victims don't spot breaches themselves. Only 13% are discovered in-house, and a customer discovers fewer than 1 in 10.

The Pwn Cloud is a project undertaking the challenge of scalable remote testing. Its first offering is Citadel PX, which enables enterprises to easily and cost effectively penetration test anywhere, on-demand for multiple locations.

Sampling leaves remote locations vulnerable and travel to remote offices is expensive and inefficient

Pwnie Express Citadel-PX eliminates the pain of security testing, making frequent & comprehensive penetration testing an affordable reality.

Pwnie Express protects you at all of your points of presence.

- Centralizes control and visibility of penetration testing and network assessments
- Reduces risk by monitoring assets across the entire enterprise
- Delivers affordable penetration testing and security assessments anywhere
- Eliminates sampling and point-in-time security testing
- Increases frequency and breadth of security assessments
- Offers on-demand visibility in both wired and wireless environments
- Addresses growing compliance requirements (PCI, FISMA, GLBA, HIPAA)

Pwn Cloud

The Citadel-PX solution and Pwn Cloud give you control of your security assessment process.

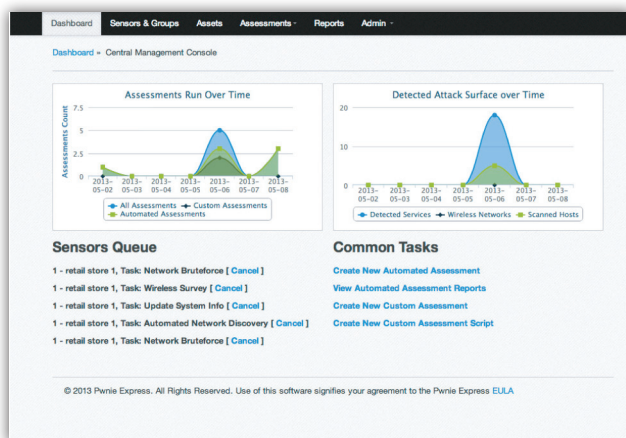

Features

- On-demand discovery, penetration testing and asset monitoring
- Centralized console that aggregates information from all locations into a single, web-based interface
- Visibility into penetration testing and network assessment process
- Quick, secure connectivity over HTTPS
- Automated discovery for network and wireless assets
- Customizable tasks and pluggable automation modules
- Scalable to thousands of devices

Benefits

- Centralizes control and visibility of assessments
- Eliminates sampling and point-in-time assessments
- Better promotes compliance

PCI regulations (11.2 and 11.3) mandate that penetration testing be conducted at least annually. Or anytime there is a significant infrastructure or application upgrade or modification; e.g., a new system component installation. Is your organization ready and prepared for these requirements?

Take control of your auditing and security assessment program with Citadel-PX
